

Product Strategy — Earn the post-acute relationship

The growth wall is caused by success: users feel better, then stop opening Fable.

Strategic thesis Make Fable useful after the acute phase — without becoming clinical or losing the simplicity and trust that made it work.

WINNING ASPIRATION

Ongoing, trusted everyday wellbeing after acute anxiety.

WHERE TO PLAY

Existing 25–45 users entering the post-acute phase; mobile freemium/premium.

HOW TO WIN

Personalised, low-friction check-ins, recommendations and routines.

CAPABILITIES

Lifecycle detection, segmentation, AI check-ins, experimentation, safety.

SYSTEMS

Cohort retention, weekly usage, renewal, monthly experiments, quarterly review.

OKR CASCADE

Objective

Become the trusted ongoing wellbeing companion after the acute need passes.

KR 1 **+30%** 180-day post-acute retention

KR 2 **+25%** weekly active usage

KR 3 **+20%** premium renewal

HARD NO

Do not make social/community the primary growth strategy yet.

Outcome Roadmap — Put the retention Rocks first

Three near-term bets test the core post-acute value hypothesis before expansion.

NOW · 0-3 MO

- 1 **Personalised post-acute engagement**
- 2 **Reliable contextual re-engagement**
- 3 **Everyday wellbeing value**

NEXT · 3-6 MO

- 1 Reduce product friction & load time
- 2 Reframe onboarding for ongoing wellbeing
- 3 Test habit mechanics selectively
- 4 Close accessibility gaps

LATER · 6-12 MO

- 1 Extend to web / wearables
- 2 Localise after retention is proven
- 3 Reassess community as separate hypothesis
- 4 Evaluate B2B expansion later

TRADE-OFF

Sequence retention learning first; push optimisation and expansion behind proof; exclude clinical expansion from this horizon.

Team Charter — Outcome ownership beats shared-feature ownership

Clarify who decides before the AI check-in layer becomes a shared-surface conflict.

WHAT WE OWN

PM1

Onboarding & early activation

PM2

Retention & post-acute experience

PM3

AI-powered check-in capability

**CORE
TEAM**

Roadmap, experiments, personalisation, product measurement

OUT OF SCOPE

Clinical repositioning • company-wide AI infrastructure • acquisition/media strategy • B2B expansion in the current horizon

HOW WE DECIDE

- Outcome-owning PM decides within the surface.
- Shared technology does not transfer outcome ownership.
- One synchronous attempt to resolve cross-team conflict.
- Unresolved conflicts escalate to Product Lead within 24h.
- Hard Nos reopen only with new evidence; safety can pause release.

AI CHECK-IN CONFLICT EXAMPLE

Financial Model — Fund the evidence, not the headline

Stress-test the supplied Team Tier case before committing scale funding.

\$12

seat / month

4%

conversion assumption

120

team conversions / qtr

\$103.7K

net new ARR / Q1

13.2 mo

reconciled payback

STRESS-TEST

Conversion-adjusted CAC	~\$950 per converted team
Simplified revenue LTV	~\$5,760 per team
Simplified LTV:CAC	~6.1:1
Churn at 25%	LTV:CAC falls to ~3.6:1
CAC +20%	payback rises to ~15.8 months

FUNDING DECISION

FUND WITH CONDITIONS

The supplied 4.7-month payback does not reconcile with the stated CAC, conversion rate and team revenue. Validate the economics before scale.

KILL CRITERION

If conversion is <3% by end of Q2: stop scaling, add no Q3 headcount, and reallocate capacity to the core post-acute roadmap.

Individual Insights — What changed in my product-leadership thinking

The project connected strategy, prioritisation, operating model, finance and AI into one decision system.

FRICTION

Keeping every decision anchored to one diagnosis while resisting attractive but off-strategy opportunities — and avoiding false precision where the case lacked baselines.

KEY LEARNINGS

Strategy is visible in what does not get funded. Roadmaps are hypotheses. Decision rights remove ambiguity. Financial fluency means challenging assumptions and units. AI should strengthen judgment.

AHA!

Strategy, roadmap, team design and finance are the same decision viewed at different levels — each must reinforce the same bet and the same evidence threshold.

LEADERSHIP TAKEAWAY

A strategy is operational only when the roadmap, decision rights, financial logic and kill criteria all tell the same story.
